Abstract (en)
[origin: US4369602A] A surface finishing device operates by means of a member designed for polishing, scouring, burnishing or the like and constituted by a resilient structure allowing some distortion along its longitudinal axis. This member has an annular constriction formed from its lateral surface, being designed as bellows formed of successive frustoconical sections.

Abstract (fr)
Le dispositif (1) est constitué d'une structure élastique permettant un débattement suivant son axe longitudinal et comporte un étranglement (6) aménagé à partir de sa surface latérale. Avantagusement, l'organe (1) est un soufflet formé d'au moins deux troncs de cône jointifs (4) et (5).
