Abstract (en)
[origin: EP0042449A1] 1. A folding Ski consisting of a front part (1) comprising the tip of the ski and a rear part (2), the two parts of the ski being connected to one another in an articulated manner by way of a double joint formed by a connexion and by link pins (5), and the link pins (5) being closer to the underside of the ski than to the upper side of the ski, and consisting of at least one quick-action closure (4) on the upper side of the ski for locking the parts (1, 2) of the ski which, when the ski is opened out, are supported at one end in each case with a support surface (6), characterized in that the connexion which forms the double joint is constructed as an independent inserted part (7) which forms matching surfaces against which the parts (1, 2) of the ski bear with their support surfaces (6) when the ski is opened out.
