Abstract (en)
[origin: ES8204493A1] The invention relates to a device for constructing a structure constituted of a floor and vertical walls (9) in concrete, comprising an external framework (2) made up of panels erected on a lower levelled surface (1) and comprising at its upper part an outer peripheral bracket (7) and a carriage (12) capable of being moved and guided along the said peripheral bracket, the said carriage forming a movable frame for removable casting components (15). Application to the field of construction and civil engineering.
