Abstract (en)  
[origin: EP0042832A1] 1. Package comprising a wrapper consisting of a sheetlike, flexible and foldable packaging material, the said packaging material having a doubling-up zone in which it forms two layers (4, 5) surface-bonded to one another by means of a bonding agent, with one of the layers (4) merging into a wrapper portion which is connected to a tearopen member (7) which continues into the doubling-up zone, characterized in that in the doubling-up zone the zone of the layer (4) occupied by the tear-open member (7) has opposite to it, in the other layer (5), zone (11) which is bounded by lines of weakness (12) and, where appropriate, the boundary (13) of the doubling-up zone, the tear-open member (7) in this doubling-up zone optionally being surface-bonded to the two layers (4, 5) by means of a bonding agent.
