Abstract (en)  
[origin: EP0043107A2] Harness (1) for practising surf. This harness (1) has a hook (8) secure to a metal plate (7). The hook may be hooked to both sides of the wishbone, at the two ends of the lines which are attached thereto. The hook is secured to braces (3, 4) and to a belt (5) connected to a dorsal plate (2). In a preferred form of execution, a crutch strap (6) is arranged between the plate (7) and the dorsal plate (2). This dorsal plate (2) forms a large padded surface. The hook (8) is arranged on the harness (1) at a place corresponding to the chest of the user. To prevent a traction on the hook (7) from exerting an excessive tightening of the user's thorax, the dorsal plate (2) has a flexible reinforcement (13) adapted to the body profile. At least the belt (5) is connected to the reinforcement (13). This reinforcement (13) comprises a plate (14) of which the contour corresponds to that of the back of the user. The plate may optionally have outer additional stiffeners (15, 16, 17).
