Abstract (en)
[origin: EP0043140A1] 1. A pelleting press, in particular a feed pelleting press with a shaft (24) which carries a support (21) for two or more press rollers (13, 14) which are arranged inside an annular press die (11), and with a die carrier (42) for the press die, with the die carrier being arranged around the shaft (24) and being relatively rotatable thereto, wherein the shaft (24) and the die carrier (42) are so supported relative to each other that a uniform loading or deformation of the press die (11) is ensured, characterised in that the support of the shaft (24) and/or of the die carrier (42) takes place by journalling the elastically constructed shaft, and/or the elastically constructed die carrier, in an overhung manner.
