Abstract (en)
[origin: US4379840A] This invention relates to a process for determining the uric acid content of biological material by contacting the biological material with a reagent composition comprised of uricase, catalase, aldehyde dehydrogenase, a lower alkanol, and nicotinamide adenine dinucleotide or nicotinamide adenine dinucleotied phosphate, the improvement which comprises determining the uric acid content in the presence of 2-mercaptosuccinic acid.
