Abstract (en)

The machine comprises a first feeder cyclically operable to feed predetermined quantities of particulate material to a receiving chamber 17. Discharge means is provided and is operable to cause or allow the discharge of each quantity of particulate material into an individual packaging receptacle 18 for bulk filling at a first station. A second feeder is operable to feed a selected supplementary quantity of the material to each bulk filled receptacle 18 at a second station concurrently with operation of the first feeder and discharge means to bulk feed subsequent receptacles.
