Abstract (en)
[origin: EP0044265A1] 1. Locking device for a sliding window, door or the like having at least one control rod (4) provided, on the one hand, with a least one locking element (6) transversally adjustable in relation to the said control rod (4), by moving in a slot (7) in the said control rod (4), and on the other hand with a compression device (29, 38) of the said element, characterized by the fact that the compression device aforesaid (29, 38) includes a cross-piece (29) inserted within the slot (7) in the control rod (4) and resting upon the locking element (6), the said cross-piece (29) being adjustable by means of an adjusting device (38) perpendicularly to the direction of adjustment of the locking element (6) and being provided with guides (30, 31) interacting with the control rod (4) to prevent any transverse movement of the said cross-piece (29) in relation to the control rod (4).
