Abstract (en)  
A cooker has a combustion chamber surrounded by a sleeve. The combustion chamber has an inlet means consisting of a pipe passing through the sleeve and into the combustion chamber. The combustion chamber rests on a flue box which has an inlet aperture connected to the space between the sleeve and the combustion chamber, and an outlet aperture connectable to a chimney or stack. The flue box comprises a base tray with peripheral flanges and an upper surface on which surface the inlet and outlet apertures are formed. The upper member has downwardly directed side walls that releasably engage the flanges of the tray forming a substantially smoke tight flue box.
