Abstract (en)

[origin: EP0044781A2] 1. A container comprising a body closed by a cover and intended to receive a product such as a cosmetic cream which can be used up by taking successive amounts, causing the surface condition of the said product to vary, characterised in that the cover is formed from two pieces of which one, the inner piece, is opaque and exhibits a uniform surface simulating that of the product before any of it has been removed and the other, outer, piece is translucent and has a non-uniform thickness to create an optical effect as a result of which an observer sees an image which simulates the product and gives a not necessarily enlarging relief impression.
