Abstract (en)

[origin: WO8102300A1] All alkali metal silicate and an organic polyisocyanate or polyisothiocyanate are mixed and then heated while agitating thereby producing a poly (polyisocyanate alkali metal) prepolymer which is cured with heat or a curing catalyst and/or an initiator.

Abstract (fr)

Tous les silicates de metaux alcalins et un polyisocyanate ou polyisothiocyanate organique sont melanges puis chauffes sous agitation produisant ainsi un prepolymere de poly (de metal alcalin) polyisocyanate qui est polymerise par la chaleur ou un catalyseur de polymerisation et/ou un initiateur.
