Abstract (en)

[origin: EP0044883A2] Device and process for anchoring tensioning elements (13), such as strands, bundles of metal strands or cables with metal or concrete structures (11), comprising one or more tensioning elements (13), a plate (25, 45) for load distribution, the plate being perforated for the passage of said tensioning elements (13), and clamping means (26) for each of the tensioning elements (13), according to which there are further provided: a box (20, 40) for receiving all said tensioning elements (13) so as not to contact the box walls, the box being provided with opposite openings of a sufficient size to allow the passage of said tensioning elements (13); a plurality of tubes (21) of sufficient inner size to accommodate with clearance each of the tensioning elements (13); a packing of epoxy resins (30) in said tubes (21) and said box (20, 40) about said tensioning elements (13). Provision is also made for possible adjustment of the strains by means of ring nut (43), as well as interchangeability of the tensioning elements.
