Abstract (en)

[origin: EP0045449A1] A bubble pack is formed from two sheets welded or heat sealed together, the bubbles forming medicament (25) accommodating chambers (8). The strength of the resulting package is such that a child can neither force a pill from its chamber (8) nor breach the chamber by tearing the package inwardly from its edge, manually. Along an edge of the package is a row of notches formed by intersecting edge portions (9, 10), each notch optionally having an inwardly-directed incision (11) at the root (12) thereof. The notches assist tearing of the package which will yield to a force an adult can muster but not musterable by a child. <IMAGE>
