Abstract (en)

An electronic system for the capture and register of data onto a magnetic support for control is claimed and described that consists at least of a central processing unit (1), a power supply module (2), a couple of capture transducers (3), and a data capture cassette at a data capture unit (4). Preferably actuation transducers (5), a graphical information display (6), and an external communication module (7) are provided. This system offers the advantages of greater data register capacity, a more accurate registration of data, direct processing of data collected via the data capture unit, easy adaptability, simplicity of use, possibility of visualizing accumulated or instantaneous data.
