Abstract (en)

[origin: EP0045526A1] 1. Creative toy based on the form of a straight rod comprising strung, interconnected components (2), whereof the two front faces of each of these forms two connecting faces (8) inclined by equal or oppositely equal angles to the longitudinal axis of the rod and whereof the in each case adjacent components (2) with their adjacent, congruent connecting faces (8) superimposed are resiliently held against one another so as to be rotatable about a connecting member passing through their geometrical centres, characterized in that the connecting member comprises axle parts (6) which, in all turning positions of the components (2), run perpendicularly to the in each case engaging connecting faces (8) of the adjacent components (2) and that all the connecting faces (8) of components (2) are shaped as a regular polygon.
