Abstract (en)

[origin: EP0045870A1] 1. Hand labelling apparatus for imprinting and dispensing pressure-sensitive labels (14) adhering to a carrier tape (15), comprising a housing (1) having at its rear end a grip (2) and an operating lever (3) pivotal against said grip (2), a printing mechanism (7) disposed in the front region of the housing (1) and driveable by the operating lever (3), said printing mechanism (7) being disposed in a frame (22) which is connected to the housing (1) pivotally for pivoting the printing mechanism (7) out of the housing (1) with disengagement of the driving connection (5, 6) between the printing mechanism (7) and the operating lever (3) and a feed means which is disposed in the housing (1), driveable by the operating lever (3) and feeds the carrier tape (15) from a supply roll (13) to the printing mechanism (7) and to a peel edge (19) at which the pressure sensitive labels (14) detach from the carrier tape (15) and move into a dispensing position beneath an applicator roll (21) rotatably mounted at the front end of the lower side of the housing (1), characterized in that with a rotary printing mechanism as the printing mechanism a device (28, 29; 33) is provided for holding the rotary printing mechanism (7) in a basic position when the driving connection with the operating lever (3) is disengaged.
