Abstract (en)

A wire holding jig is disclosed, for apparatus which installs electrical wires into a connector, and a method of manufacturing the jig is disclosed, in which a metal blank (1), has a row of apertures (4) formed by etching. A ridge (12) at a bend in the blank (1) is intercepted by the apertures (4) thereby providing wire holding passageways. The peripheries (6) of the apertures are whet to keen edges that trim to length, any wires (54) laid into the passageways.
