Abstract (en)
[origin: EP0046438A1] 1. Framework of units (3 and 3x), the assembly of eight of which symmetrically two by twomakes it possible to erect a modular construction (1) the form of which is a 90 degrees cross formed by four arches in the extention of four outside openings (2) in the form of semicircles, characterized by the fact that each framework of units comprises three supporting parts, one edge (4), one ridge (5) and one intermediate (6), in shape following noticeable lines delimiting three sides, the edge (4) or façade part is in the shape of a quarter-circle, the ridge (5) at right angles to the edge (4), an oblique straight line and the intermediate (6) an arc of a circle (7) extended by an oblique straight line (8), the edge (4) and intermediate (6) parts being joined together by transverse struts (9) holding a frame (10) fixed to the three supporting parts by a filling material (16) applied by pouring into an appropriate shaping mould which serves as a form.
