Abstract (en)

[origin: EP0046457A1] 1. A four-axle bogie for low-platform vehicles, comprising two H-shaped frames (5), each of which carries two wheel-and-axle sets (11) and which are articulately connected to a main carrier (1), which constitutes a crossbeam (2) and receives the swivel bearing (3) of the bogie, characterized in that the superstructure of the vehicle is mounted on the crossbeam (2) by means of a depending pin, which is rigidly secured to the superstructure that each of these ends of the side members (8) of the H-shaped frames (5) which face the crossbeam (2) is pivoted to the crossbeam (2) on a horizontal axis (6) directly or with an interposed two-armed lever (4), and that the superstructure of the vehicle is secured to each side member (8) by means of a carrying spring (15).
