Abstract (en)
[origin: US4459127A] A process for the manufacture of a folding box tube from a folding box form for dispensing articles, such as a cardboard box construction for dispensing pocket handkerchiefs, napkins, or the like, forming a box of a rectangular shape with a rectangular cross-section consisting essentially of one piece of rigid, but foldable, material adapted to be folded to give five surfaces and end closure pieces, the first and fifth surfaces, said process consisting essentially of preparing said folding box form by die cutting, folding said folding flap inwards along a folding line parallel to the bottom surface of said box when formed, folding the five surfaces to form a folding box tube and fastening the first and fifth surfaces together, wherein said folding flap at its outer extension touches the bottom surface of said folding box tube when folded, forming an overlap adapted to be fastened together to form a front surface of said box, a perforated area in said front surface adapted to be opened to the interior of the formed box, a folding flap in one of said first or fifth surfaces forming the front surface adapted to be folded inwards along a folding line parallel to the bottom surface of said box when formed and at its outer extension to touch said bottom surface.

Abstract (de)
Es wird eine Kartonverpackung für Tücher mit einer aus zwei flach übereinander zu legenden Kartonflächen (1, 5) eines einteiligen Zuschnitts bestehenden und eine Aufreißperforation (7) enthaltenden Vorderwand vorgeschlagen. Dabei soll die Entnahmemöglichkeit speziell für die unteren Tücher im Stapel (16) erleichtert werden. Erreicht wird das durch eine aus einer der die Vorderwand bildenden Kartonflächen (1, 5) auszustanzende und beim Schlauchen nach innen um eine mit Abstand von der Kartonbodenfläche parallel zu dieser verlaufende Anlenklinie (13) zur Anlage an die Bodenfläche (4) zu faltende Klapplasche (12).
