Abstract (en)
[origin: EP0046827A1] A process for making asphalt concrete comprises mixing starting materials including aggregate and binder material and optionally, other additives, to a final temperature of about 60 DEG C to about 150 DEG C in an indirectly heated mixing chamber (28) which is sealed. The moisture content of the asphalt concrete mixture is controlled as a function of the moisture content of the starting materials. Apparatus for performing the process in a continuous or batch operation is also set forth.
