Abstract (en)

[origin: US4383019A] The invention relates to a process for electrophotographic color image development by which charge images are rendered visible by electrophoretic deposition of color zones on a continuously moving image carrier-band in development stations, using contact electrodes, development electrodes and blocking nozzles for the developer liquid whereby the development of the image in the development station is carried out with a substantial deviation alpha of the direction of movement of the image carrier from the horizontal.
