Abstract (en)

[origin: US4387148A] An electrophotographic recording material comprising an electrically conductive support, a photoconductor layer and an about 1 to about 50 μm thick protective layer comprising a radiation-hardened, crosslinked polyester which is formed from trimethylol propane, adipic acid and acrylic acid and which has a surface resistance ranging from about 5.5×10^{12} to about 2.5×10^{13} ohm and a volume resistivity ranging from about 7×10^{10} to about 5×10^{13} ohm cm, measured at 23 DEG C. and 50 percent relative humidity, and a process for producing such a recording material.
