Abstract (en)

[origin: EP0047194A1] 1. A blade door handle, more specifically for a motor vehicle, comprising a pivoting blade completely housed and articulated, with a drawback spring (19), behind a solid mask (5) horizontally covering the upper part of an access recess (4) dished into the bodywork metal (3), and a lock-operating arm (9) integral with the blade, this handle being characterized by the fact that the blade articulation (15) on the mask (5) is located near the upper edges (6) of the mask and access recess, in such a way that, while it is being drawn upwards, the blade (8) is brought close to the lower edge (17) of the mask by a small pivotal movement in relation to a line perpendicular to the hinge axis (15).
