Abstract (en)

[origin: EP0047360A1] 1. Process for applying a sliding layer to the surface of a record carrier covered with a thin aluminium layer, wherein a 2 to 1000 nm thick layer of a metallic soap is applied as a sliding layer to the surface of the aluminium layer, characterized in that, prior to being applied in a dry, mechanical process, the metallic soap is mixed in a mortar or mill with 10 to 30 per cent by weight, as referred to the weight of the sliding layer, of a multi-functional, aliphatic alcohol to form a homogeneous mass.
