Abstract (en)

[origin: US4497346A] The clutch arrangement contains a stroke member which carries two levers and a spring connecting the levers. The stroke member is driven by a drive lever which engages between the two levers. The stroke member drives the bar for the control levers while a scanning arm is moved against the armature of an electromagnet. Both movements occur with a force transmission occurring via the single spring. This provides for especially gentle treatment of the parts. At the same time, relatively few parts are needed.
