Abstract (en)
[origin: WO8102935A1] A single component type dry-process electrophotographic developing agent having improved hygroscopic properties, comprising a mixture of a 5 to 50(Alpha) size toner and a hydrophobic fluidizing agent, The fluidizing agent is prepared by coating an inorganic powder, organic powder, metal powder, or alloy powder with a non-hydrophilic synthetic resin thin film . Use of a conductive material as a core of the fluidizing agent and selection of a thin resin film thickness within a range to produce electron or ion tunnelling results in the formation of a fluidizing agent with no hygroscopic properties and which is electrically conductive.
