Abstract (en)

[origin: EP0049435A2] The subject matter of the invention is a device for connecting together sheets (3) which form the outer sheath (29 or 36) of a collapsible dam, and simultaneously connecting said sheath to the bed of a waterway. Said device comprises a plurality of elementary clamps (1 or 22) alternated with hinges (2) formed by the sheets (3) of the sheath. Rubberized ropes (14, 15 or 27, 28) extending from one bank to the other of the waterway, provide continuity for the clamps and hinges.
