Abstract (en)
[origin: EP0049778A1] 1. Process for the distribution of ammunition in which a carrier flight body, or a distribution unit (3) associated therewith, before the ammunition formed as two or more sub-flight bodies is retarded before the releasing of the sub-flight bodies by additional braking means (4) and is conveyed in a predetermined release position, characterised in that the release of the sub-flight bodies is, at the time, controlled centrally for each on its own by means of a searching arrangement (5) assigned to the distribution unit (3) common to all sub-flight bodies, with coupled plotting arrangement dependent on the target determination by the searching arrangement (5).
