Abstract (en)
[origin: EP0049880A1] 1. System shuttering for a concrete floor comprising a bearer, with lateral shuttering members (1, 2, 61, 130, 131) suspended from above and detachably from a support, for the side faces of the bearer, whereof the shuttering membrane (137) is attached to joists (65) extending at right angles to the longitudinal axis of the bearer, with lower shuttering members for the lower face of the bearer, which comprise at least one shuttering membrane and with fastening means (7, 9, 148) for the lateral shuttering members (1, 2, 61, 130, 131), which fastening means can be released when removing the shuttering, characterised in that at least the lateral shuttering members (1, 2, 61, 130, 131) of one side are suspended to swing from the floor shuttering (floor joist 65) and comprise projections (strip 32) and/or bearing boxes, which cooperate with bearing boxes (69, 70) and/or projections of a part (65) of the floor shuttering.
