Abstract (en)
[origin: EP0049907A2] 1. Printer, particularly thermo-electric printer with printing points which can be controlled electrically parallelly and which consist of a roll which is motordriven and fulcrumed at a housing, and a printing head which lies against the roll spring-loadedly and the line of print of which is disposed in the longitudinal direction of the roll, characterized by the fact that the printing head (22) has an adjusting device which makes possible a variation of the angle of the longitudinal axis of the printing head to the longitudinal roll axis, so that after adjustment the printing line of the printing head lies against the roll exactly tangentially and at any point with the same pressure.
