Abstract (en)
[origin: EP0050069A1] 1. Liquid container composed of, on the one hand, a rigid box (1) having the shape of a rectangular parallelepiped without any internal partitioning, said box having external ribs (25) and having an openable removable uninterrupted cup-shaped face (11) fitting inside said box (1) and provided with means for being fastened to said box, and on the other hand, a flexible internal pouch (21) formed of a flexible fluid-tight film having an opening provided with a ring (22) on which a plug (23) is adaptable, characterized in that : - the box comprises on its upper face (33) annular ribs for straight and crossed stacking, said face being provided with a funnel (7), the wall of which protrudes partly outside the face (33) and surrounds the ring (22), said external protrusion being part of the annular stacking ribs (2, 3) of the box ; - the outer diameter of the ring (22) is akin to the internal diameter of the funnel (7) ; and - the openable cup-shaped removable face (11) forms the bottom of the box (1), the rims of which are turned towards the inside of the box.
