Abstract (en)

[origin: EP0050277A2] An air cleaner, particularly an extractor hood (1) for installation over cookers or the like, comprising a fan (3) which draws in and discharges cooking vapours produced and which is disposed inside a pressure chamber (6) and is provided with an air outlet (9) for recirculatory operation and with an air outlet (10, 10') which can be brought into communication with an air exhaust system and which is closed by a plate (14 or 14') during recirculatory operation of the extractor hood (1). To enable the extractor hood (1) to be changed over by the user when required from recirculatory operation to air exhaust operation or from summer to winter operation, the closure plate (14 or 14') for the exhaust air outlet (10 or 10') is pivotally mounted and on the front (7) of the extractor hood (1) a flap (8) is provided to control the air outlet (9) for recirculatory operation. <IMAGE>
