Abstract (en)

An article of outerwear is usable as a jacket and as a bag; said outerwear essentially comprises a trunk portion covering at least the upper half of a human body, said trunk portion being formed with a head opening, sleeve portions through which both arms extend sideways and a head portion detachably secured to the trunk portion. When using the trunk portion as a bag, the sleeve portions are received in the trunk portion so as not to protrude outside and the openings through which the sleeve portions did extend, and also the head opening, are closed. The sleeve openings can be closed by means of fastener means which are operated after the sleeve portions have been tucked into the trunk portion. The head opening enables the head portion to be tucked into the trunk portion and is then covered by a flap.
