Abstract (en)
In an air conditioning method and system for automotive vehicles in which a passenger compartment air temperature is maintained at a desired level, an air conditioner outlet duct temperature is controlled in accordance with a target outlet duct temperature produced by an arithmetic operation of temperatures at various locations of the automotive vehicle. In order to produce the target outlet duct air temperature, a base outlet duct air temperature is calculated in accordance with a predetermined equation representing a heat equilibrium within the passenger compartment of the vehicle, a temperature correction value corresponding to the passenger compartment air temperatures is then added thereto.
