Abstract (en)  
[origin: EP0051309A2] In a window or the like comprising a frame and a casement, driving-rod means being arranged on at least one part of the casement legs, preferably in the rebate region, to perform window functions, for example tilt readiness, turn readiness and close-and-lock, and these driving-rod means being movable in the longitudinal direction of the respective casement leg by manual actuation means which can be set successively in different functional positions, it is proposed that the casement (12) be lockable in a part-open position against complete closing and further opening, by fixing means (42) through the agency of the driving-rod means (26). <IMAGE>
