Abstract (en)

[origin: EP0051319A2] 1. Hollow-section support and/or assembly part for buildings to be erected by the prefabrication method, comprising an extruded hollow-section core part (1) of metal, which is virtually completely faced by four wooden frame parts (2a to 2d) which are of the same type, are arranged at right angles relative to one another and extend to the longitudinal direction of the extruded hollow-section core part (1), characterised by hollow connectors (50) which each engage in the horizontal joints of adjacent parts, such as wall parts (20) or the like, and are welded to the extruded hollow-section core part (1) and which, in an L-shaped, X-shaped or star-shaped design, and in top and bottom horizontal grooves of the adjacent parts, such as wall parts (20) or the like, and are anchored in the latter.
