Abstract (en)

[origin: EP0051715A2] 1. A protective device for a high-voltage condenser bushing comprising a soft-paper capacitor element, characterised in that a conical ring (8) with a downwardly tapering inner diameter is disposed about the inner circumference of the mounting flange (2), and that a ring (9) of insulating paper with an upwardly flaring outer diameter is wound as counter-part on the capacitor element (4) at the level of the mounting flange (2) such that normally the two rings are disengaged while in case of malfunction they prevent falling-through of the soft-paper capacitor element.
