Abstract (en)

[origin: EP0051717A2] This invention relates to a self-propelling projectile (20) of the type including a solid nose (21) and a propelling charge housing recess (28) communicating with a hollow space (128) containing the priming charge able to undergo a radial or lateral percussion. In particular, means (b) are foreseen that assure the projectile rear part (23) seal in respect to the explosion generated gas and further means (c; 34) that permit extraction of the unexploded projectile in case of malfunctioning. This invention relates also to the method for manufacturing the projectile.
