Abstract (en)

[origin: EP0052191A2] 1. Atmospheric universal burner, especially for gas-heated domestic appliances, with at least one elongate burner pipe (10, 12) which has in the lower region an orifice (38) for introducing the fuel and which is provided on its head side with slits (62) arranged transversely to its longitudinal axis and intended for the outflow of the fuel and for forming main flames, and with holes (64) for forming auxiliary flames, characterised in that the slits (62) for the main flames are formed between longitudinal edges (72) of tabs (66) on the burner pipe (10, 12), which project from the plane of the head side and which are located opposite one another in pairs, and in that the holes (64) for the auxiliary flames are arranged directly at the ends of the tabs (66) in the plane of the head side.
