Abstract (en)

The invention is relating to a method of forming a set of a predetermined number of concrete piles (1-17) of relatively different diameters for coating slopes or the like whereby concrete piles are arranged in the set in polygonal relationship in a manner such that on the various sides of the set such a number of piles are located that protruding parts of piles located on one side fit in adequate manner in recesses between the piles of another side so that by disposing sets side by side the piles are also arranged in polygonal relationship in the coating formed with the aid of the sets.
