Abstract (en)

[origin: EP0052972A1] An article useful for the conditioning of clothes in an laundry dryer during the drying cycle is produced which comprises a flexible polyurethane foam substrate impregnated with an effective amount of a conditioning agent and which has on at least one surface of the substrate a pattern which is substantially removed from the substrate during the drying cycle thereby indicating to the user of the article that the conditioning agent has been substantially removed from the article during the course of the drying cycle.
