Abstract (en)

[origin: EP0052980A2] An electrical connector assembly for coaxial cable includes, a conductive outer shell (6) connected to a conductive sheath (16) of the cable, a conductive center contact (8) connected to a center conductor (12) of the cable, a hollow retention spring (2) carrying spring fingers (22) doubled back on themselves and distributed against the interior periphery of the shell (6). and a plug (4) surrounding the center contact with a composite dielectric of concentric, resilient dielectric sleeves (34, 36) separated by a dielectric air space (33),
