Abstract (en)

[origin: ES8304025A1] A process and an installation for supplying fragile caps to a closure machine which operates at a high rate, wherein caps are manufactured in situ in a plurality of cells which operate in a parallel mode, with the caps then supplied to the closure machine by a single conveyor which preserves the orientation of the caps. Detectors disposed on inclined intermediate channels control the output rate of the cells and the conveyor to ensure the machine is supplied with caps at all times, even when a cell is stopped for maintenance.
