Abstract (en)  
In this box, the opening of each lateral wall (12) is parallel to the groove line (10) between the wall (12) and the base (6), while attachment lugs (14) project from the lateral edges of the upper wall portions (8) and form hooks oriented in the direction of the longitudinal wall (7), these hooks being separated from the groove line (4) by a distance (1) which is less than that (L) so that, after the box has been made up and the lugs (14) have been inserted in the openings (15), the elasticity of the tabs (13) ensures attachment of these lugs over the edges of the openings. <IMAGE>

Abstract (fr)  
Dans cette boîte, l'ouverture de chaque paroi latérale (12) est parallèle à la ligne de rainage (10) entre la paroi (12) et le fond (6), tandis que les pattes d'accrochage (14) font saillie des bords latéraux des portions de paroi supérieure (8) et forment des crochets orientés en direction de la paroi longitudinale (7), ces crochets étant séparés de la ligne de rainage (4) par une distance (1) inférieure à celle (L) afin, qu'après formation de la boîte et introduction des pattes (14) dans les ouvertures (15), l'élasticité des languettes (13) assure l'accrochage de ces pattes sur les bords des ouvertures.
