Abstract (en)

[origin: ES8300287A1] In an apparatus for placing packets of tube sections in the stacking magazine of a rotary applicator, a pivotable arm is divided between the stacking magazine and conveyor belt for supplying the tube section packets. The arm carries a longitudinally displaceable supporting frame having rollers at its ends for an endless conveyor belt. The arm is pivotable between an upper packet-receiving station and a lower packet-discharging station and is provided with an abutment for retaining the packets on the supporting frame. A braking system engages the upper run of said belt between the abutment and the rear roller and releases same to receive the packets.
