Abstract (en)

[origin: EP0053748A2] 1. Process for treating metallised sheet-form textiles with polymers for the purpose of increasing the microwave reflection in the frequency range of 1 to 1,000 GHz, characterised in that the metallised sheet-form textile is subjected to space-filling impregnation with a polymer having a dielectric loss factor tg delta in the microwave region of less than 0.01.
