Abstract (en)

[origin: EP0053835A2] 1. Method for manufacturing friezes and slats for slatted doors, characterized by a) providing a wooden board (1), whose breadth h approximately corresponds to a multiple of the thickness h1 of the frieze to be manufactured plus the wastes of timber and whose thickness d corresponds to the breadth of the frieze, b) sawing said wooden board (1) in its longitudinal direction into several raw pieces (2) having a rectangular cross-section and the predetermined cross-section of the frieze, c) machining the high-quality raw pieces (2) into friezes, d) further machining the low-quality raw pieces (2) each into several slats (3) by severing the raw pieces (2) in their longitudinal direction.
