Abstract (en)
[origin: EP0054381A1] A rotor vane assembly including a rotor arm (19, 21) formed from electrically insulating material and having therein a recess (31) within which in use one end of a shaft (12) is received to mount the assembly on said shaft, a vane (23) formed from conductive material and secured to said rotor arm to rotate therewith and a conductive clip (33) having a first portion (34) within said recess (31) and arranged to engage said shaft end in use to retain said assembly on said shaft, the clip (33) having an integral second portion (35c) which engages said vane (23) so as to be electrically connected thereto, whereby, in use the clip (33) provides an electrical connection between the vane (23) and the shaft (12) upon which the assembly is mounted.
